Minelab **£156.00** Detech SEF 12x10 (FBS)

12x10 SEF to fit E-trac, Explorer, Safari, Quattro

Main Description

This New range of SEF - Symmetrical Electromagnetic Field Coils are a new patented technology. with over three years of research and development, they offer greater stability and depth over similar sized search heads.

This 12 X 10 SEF coil is just slightly larger and heavier than the std 11" coil currently fitted to Explorers & Quattros. Excellent balance compensates for any weight difference.

The advantage of this coil is stability. This means sensitivity can be increased to give greater depth. Average depth increase is reckoned to be 10% - 15% depending on ground conditions.

£156.00 + £6.00p&p
