Tidal rivers can prove very productive sites to search. All you require is the 'know how'. This book provides just that.

#### Main Description

The rivers around our coastline have frequently been flooded in recent years. Millions of gallons of rain water, combining with the effects of exceptionally high tides, have stripped many estuaries and tidal river banks of mud, sand and gravel to expose numerous coins and artifacts to the eyes and hands of experienced mud larks and detectorists who know where to hunt for them. Now, thanks to a book that is packed with detailed illustrations showing precisely what clues to look for on tidal rivers, any reader can become an expert on mudlarking and riverside detecting.
