C.SCOPE

C.Scope CS3MX

£239.99

A rugged, reliable no nonsense performer with tough design to stand the rigours of serious detecting!

Technology	VLF Motion	Ideal for	Advanced
Transmit	17KHz	Inland	*****
Search Head	8 Concentric Polo	Beach	***
Discrimination	Full range	Audio ID	No
Battery Type	8 x AA	Meter ID	No
Battery Usage Time	40 Hrs	Weight	0 Kg

Main Description

Special offer price - Save £50.00 (usual price £289.99)

Only £239.99 inc Free coil scuff cover & Free post*!

The CS3MX is built to withstand the rigours of the detecting environment. The chassis design came from C.Scope's industrial side making detectors for use on construction sites, so it's certainly up to the job! Another neat feature is the ability to fit the control box on a belt leaving an extremely

Product Information - Metal Detector Zone

lightweight stem and search-head on the business end. The CS3MX comes with belt clip supplied. Although balance with or without the control box mounted is excellent. Electronically, the CS3MX has a classic straightforward style of operation which most professional detectorists have as their ideal. 8 x AA batteries deliver 12 volts of power, again, perfect for this class of metal detector. Switch on the power and turn up the sensitivity to where you like it. Many prefer a silent threshold but plenty of detectorists like to keep their detectors on the absolute limits of performance with a constant background tone and the 3mx allows you to do this. Variable discrimination and target pin-point button complete the CS3MX enthusiast styled format. We tested the CS3MX on some recently ploughed farmland. Heavy going for both detectorist and detector, especially when its clay soil. This is when you really appreciate a lightweight metal detector to go up and down and round the furrows as everything inevitably gets caked in mud. The CS3MX performed exceptionally well, the high 17KHz operating frequency certainly proving itself to be extremely sensitive. Some detectorists like to move fast so speed of response can be very important, or you can easily miss a weak signal. I am pleased to say the CS3MX passes this test with flying colours. The response is quick and the good signals ring out clear and sharp. Large iron tends to produce a 'sputter' or signal which I can only describe as 'woolly'. Little hammered coins can be recognised often before you dig purely by the clipped crisp quality of the signal. The pin-point button is a really neat feature which momentarily puts the detector into non-motion mode and position the find exactly. The CS3MX feels precise and powerful. Like any good tool, the CS3MX gives you the confidence that you're doing a good job. My stint with the CS3MX was just such a job well done, producing plenty of non ferrous targets of various sizes and no rubbish, though there was plenty of old iron around, the CS3MX eliminated the lot ! Metaldetectorzone Verdict:

The C.Scope CS3MX is an exceptionally good value metal detector. C.Scope have listened to experts and designed a metal detector based on what they have been told. Experts will love its sheer performance and the fact it is so well built it seems indestructable! Beginners will love its no nonsense simplicity and the fact that within a short space of time they too will be experts!

Specifications

Type:	Motion metal Detector
Operating Frequency	17KHz
Search Head	8" (20cm) Concentric 'polo'
Battery type	8 X 'AA'

Features

- On/Off sensitivity control
-

Product Information - Metal Detector Zone

Discrimination level Control

•

Highly tuned electronics.

•

Adjustable stem length.

•

Balanced stem with armrest.

•

Automatic motion retune.

•

Target pin-point control.

•

Headphone socket.
