Minelab Explorer SE Pro

£1,069.00

The SE Turns Pro! Lighter, Deeper and Faster.

Technology	VLF with FBS	Ideal for	Advanced
Transmit	Multi frequency 1.5-100KHz	Beach	****
Search Head	11 DD Pro	Beach	****
Discrimination	Full range with notch	Audio ID	yes
Battery Type	8XAA	Meter ID	yes
Battery Usage Time	20hrs Hrs	Weight	2.15 Kg

Main Description

Explorer SE Professional is the latest version of the world famous Explorer metal detector from Minelab. It replaces the world famous and hugely successful Minelab Explorer SE and is the most full-featured, informative, superior performance metal detector available today!

This 3rd generation of Explorer metal detector surpasses anything you've seen for depth, sensitivity and superior discrimination!

The Full Band Spectrum (FBS) circuit automatically transmits multiple frequencies simultaneously. The increased frequency range means that the signal received from the detector coil is analysed from a wide range of responses. This allows the Explorer SE metal detector to analyse more target information so that the Target Identification (ID) is more accurate.

Ground balancing is automatic with Minelab's advanced digital filtering. Whatever field conditions you encounter, from dry clay to wet black sand or rich loam, Minelab Explorer SE Pro will find what you're looking for. Minelab's unique FBS technology means deep, sensitive, accurate detecting.

This 3rd generation Minelab Explorer surpasses anything you've seen for depth, sensitivity and superior discrimination!

"3rd generation" Software features include:

Product Information - Metal Detector Zone

1. New "logical" Main Menu format, re-arranged "selections" to make browsing easier with one hand.
2. Now displays two separate screens, Smartfind and Digital - Learn and Edit screens now accessed through Main Menu.
3. New pin point -VCO type rising sound with improved volume on deeper targets.
4. New Iron Mask scale - now displays Ferrous range from 0 - 31 and AM = All Metal.
5. Fast turn on, quieter/faster turn off.
6. Audio 1, 2 & 3 are now Long, Smooth & Pitch Hold respectively. Pitch Hold similar to the BBS series of detectors.
7. Faster loading of User settings.
8. Factory preset Gain now set to 8 (used be 5)
9. Stabilized Threshold in high-trash environments.
10. New larger fonts.
11. New updated detection results on Fer and Cond in Pin Point mode.
12. Improved behavior of the Depth indicator during detection and pin pointing.

Hardware changes include:

- i. New tougher, lighter 11" 2D search head for greater depth, sensitivity & pinpointing accuracy.
- ii. New colour, style and appearance.
- iii. New front keypad decal
- iv. Battery consumption reduced by 8% approx. prolonging battery life increasing run time by 1 - 2 hrs. Our initial tests have convinced us it is much better than previous Explorers.
