### Minelab E-Trac

**£1,199.00**

The best of the best!

Technology	VLF with FBS	Ideal for	Advanced
Transmit	1KHz-100KHz	Inland	*****
Search Head	11 Lightweight DD	Beach	*****
Discrimination	full range, fully editable	Audio ID	yes
Battery Type	8xAA (rech)	Meter ID	yes-Ferrous & conductivity
Battery Usage Time	15-20 Hrs	Weight	2 Kg

#### Main Description

*"MINELAB E-TRAC has been designed to be innovative and intuitive and combined with Minelab multi-frequency FBS technology, we have a new product that sets a new benchmark for the industry."*

*The Minelab E-Trac is the latest flagship metal detector from Minelab. A totally new metal detector designed and built from the ground up. The weight and balance are improved with a more ergonomic handle. Electronically, the famous FBS technology is utilised but is much faster more efficient giving improved performance on almost every ground type including iron infested sites. The all new menu layout is intuitive and straight forward and the unique Xchange system adds a dimension for operators never before seen in metal detecting.*

#### Features include:

- E-Trac Xchange USB functionality - create, download and upload your E-Trac Settings and Discrimination Patterns for Users favourite sites; save to a PC and create a library of favourite sites or XChange them with others by email
- Ultra-lightweight waterproof 11" Double D Waterproof Coil, versatile with sharp, accurate pinpointing and depth! QuickMask™ with independent Ferrous and Conductivity rejection level adjust - a fast and simple way to edit Patterns Smartfind™
- Minelab's proven unique discrimination dual coordinate target profiling Discrimination Scale with radical realignment improves the target ID and recovery rate of good targets at depth
- Sensitivity functionality with expanded Auto, Manual and "Suggested"

## Product Information - Metal Detector Zone

settings Refined Threshold adjustment level on a 1-50 scale - greater precision to suit User requirements Pinpoint with audio and visual indicators on 2 modes makes target size and identification more accurate than ever Four pre-programmed Minelab User Modes with specific Settings and Patterns suited to Coins; High Trash; Beach and Relics. Four User Mode slots - personalise Modes to suit specific detecting target preferences and environment. Ground Setting options of Neutral and Difficult - adapt easily to benign or the most challenging operating conditions with these settings. Trash Density - High ensures fewer false signals experienced in high trash environments, Low is perfect for cleaner sites. User-centered Keypad and Menu Interface Design - enhanced usability with intuitive icons and logical menu sequences that are fast and so easy to use! Clear resolution Visual Display Panel 72mm x 48mm - designed for optimum visibility in all light conditions Ergonomic, perfectly balanced Handle Assembly - designed to ensure longer periods of detecting without fatigue! Additional Expert Features and Preferences allow E-Trac customisation to suit User needs. ...and more!! Features and functionality information can be seen on the Product Brochure and Review (scroll and open PDF files)

*Here's what The UK Field Testers are saying about the Minelab E-Trac:*

"First impression... Wow! Where do I start? Two search patterns (Quick Mask), larger viewable screen and a lighter overall feel are going to be real winners. The choice of tones selection modes is a welcome addition. And I like the extra control I now have to adjust the way the detector performs on bad ground (using the 'Trash Density' and 'Ground' controls)."

"..I dug a lot of very deep signals....and found a Roman silver siliquae and Charles I hammered half crown at exceptional depths."

"Coin mode....This is a very good starter program for first time users of the E-Trac. In fact....a good program for experienced users to use as well. On a pasture yesterday, I switched from my custom program to 'Coin mode' and immediately dug two Roman coins at over 10" depth!"

"Relic mode: Damn this is a good program! This is also the perfect base 'Pro' setting, the starting point for all really advanced programs. All I needed to do to customise the E-Trac to my style of detecting was to change 'Sounds' from 'Ferrous' to 'Conduct' and then add my own custom disc pattern.

In this mode...on a British 5p coin it gave a positive signal response at 12"."

"Although I never used auto sensitivity on the SE, I'm impressed with the way this works on the E-TRAC, a great improvement!

The recovery rate is noticeably faster. I am really looking forward for the crops to come off so I can get this on my best fields. I like the louder clearer signals to small target... I tested a cut quarter next to iron rejecting just 'nails' and the response was identifiable! This evening I've been detecting on a site where the soil is more mineralised. In fact the performance of the E-TRAC was bloomin' fantastic!!! It banged out loud clear signals on finds ... and the signal quality was a lot better on the deep small native targets with the E-TRAC (sharper and clearer audio responses)... some of the trickier SE signals just wouldn't have been dug if the E-TRAC hadn't already given positive signal on them. This is a great machine and it's going to earn me a lot of money! Well-done!"

*Our Verdict:*

Minelab have listened to customer feed back and addressed issues such as weight and balance which is now perfect. The Control panel and menu initially look daunting but are surprisingly straight forward and intuitive, it almost leads you to where you need to be. For that reason this the one top of the range unit I can confidently recommend to a beginner as well as the seasoned enthusiast. (In fact the only reason I would not recommend this to a novice is that experience of other metal

detectors is advantageous simply to understand how good the Minelab E-Trac is!) Having clocked up many hours use with a Minelab E-Trac to say I am impressed is an understatement, and as the E-Trac has the ability to sniff out targets on most sites including iron infested sites, it is now my detector of choice where ever I detect. - Craig Allison

### **The Minelab E-Trac**

**Now Just £1199.00!**

**Price Includes: Minelab E-Trac, Rechargeable Battery, Charger, Alkaline Battery holder, Koss UR30 Headphones, Coil Cover, Walborn Control box cover, CD rom, USB cable, instruction manual & Free Delivery\***
